we rely heavily on faces during social interactions humans possess the ability to recognise thousands of people very quickly and accurately without effort the serious social difficulties that follow abnormalities of the face recognition system i.e. prosopagnosia strongly underline the importance of typical face skills in our everyday life over the last fifty years research on prosopagnosia along with research in the healthy population has provided insights into the cognitive and neural features behind typical face recognition this has also been achieved thanks to non invasive neuroimaging techniques such as functional magnetic resonance imaging fmri electroencephalography eeg magnetoencephalography meg diffusion tensor imaging dti and transcranial magnetic stimulation tms however there is still much debate about the cognitive and neural mechanisms of face perception in the current research topic we plan to gather experimental works opinions commentaries mini reviews and reviews that focus on new or novel theories and methods in face perception research where is the field at the moment do we need to re think the experimental procedures we have adopted so far again what kind of techniques or combination of them and analysis methods will be important in the future from the experimental point of view we encourage both behavioural and neuroimaging contributions e.g. fmri eeg meg dti and tms despite the main emphasis on face perception memory and identification we will also consider original works that focus on other aspects of face processing such as expression recognition attractiveness judgments and face imagery in addition animal investigations and experimental manipulations that alter face recognition abilities in typical human subjects e.g. hypnosis are also welcome overall we are proposing a research topic that looks at face processing using different perspectives and welcome contributions from different domains such as psychology neurology neuroscience cognitive science and philosophy the current research topic evolved over the desire to acknowledge the relatively recent loss of three giants in the field drs shlomo bentin truettt allison and andy calder we dedicate this research topic to them and their pioneering studies

sentiment analysis research has been started long back and recently it is one of the demanding research topics research activities on sentiment analysis in natural language texts and other media are gaining ground with full swing but till date no concise set of factors has been yet defined that really affects how writers sentiment i.e. broadly human sentiment is expressed perceived recognized processed and interpreted in natural languages the existing reported solutions or the available systems are still far from perfect or fail to meet the satisfaction level of the end users the reasons may be that there are dozens of conceptual rules that govern sentiment and even there are possibly unlimited clues that can convey these concepts from realization to practical implementation therefore the main aim of this book is to provide a feasible research platform to our ambitious researchers towards developing the practical solutions that will be indeed beneficial for our society business and future researches as well

how much can we learn about normal visual perception and cognition from a malfunctioning visual system quite a lot as Michael McCloskey makes abundantly clear in this book McCloskey presents his work with a college student who has an extraordinary deficit in visual perception when she looks at an object she sees it clearly and identifies it readily yet she is often dramatically mistaken about where the object is or how it is oriented for example she may reach out to grasp an object that she sees on her left but miss it completely because it is actually on her right or she may see an arrow pointing up when it is really pointing down her errors together with many other clues lead McCloskey to some very interesting conclusions about how we perceive the world he develops theoretical claims about visual subsystems the nature of visual location and orientation representations attention and spatial representations the role of the visual system in mental imagery and the levels of the visual system implicated in awareness visual reflections makes a fascinating and compelling case that we can often learn more about a process when it goes awry than when it functions flawlessly
